

700
women die from pregnancy-related complications each year in the U.S.²

Adverse obstetric events occur in **9%** of all deliveries in the U.S. At least **30%** of these are preventable.¹

Real numbers
= Real women
and babies' lives

“It was the training itself, rather than the location or the simulation equipment used, that appeared to be the key to success”
British Journal of Midwifery⁷

79%
of OB/GYNs have been involved in a malpractice suit.³

OB/GYNs have one of the highest malpractice insurance rates of any medical profession.⁵

Childbirth complications increase the cost of delivery by

20-25%⁴

Simulation training can help address risk...

10.5

minute decrease in diagnosis-to-delivery interval for umbilical cord prolapse.⁸

37%

improvement in perinatal morbidity.⁹

49%

reduction in OB malpractice claim rates.⁶

Consider...

- Are you practicing with multi-disciplinary teams?
- Will hybrid simulation benefit your training?

Using different levels of simulation fidelity may help you achieve your goals. Learn more at Laerdal.com/LaborAndDelivery
